HIGH SCHOOL

# Technical Theatre Magnet

## What is Technical Theatre?

Technical Theatre encompasses all areas of design, technology, and administration necessary to produce a theatrical work. In this course of study, tech theatre students learn the design process starting with research and script analysis. Their artistic talents are then put to work by creating designs for theatrical productions. Throughout the year, students are also given hands-on experience by working various production roles for the other performing arts magnets in the school.

SET DESIGN & CONSTRUCTION • COSTUME & MAKE UP
